

Protractor (end-to-end testing for Angular/AngularJS)

Protractor plays an important role in the testing of AngularJS applications and works as a Solution integrator combining powerful technologies like Selenium, Jasmine, Web driver, etc. It is intended not only to test AngularJS application but also for writing automating regression tests for normal Web Applications as well.

In this topic, I will introduce with you a short tour from basic steps to advanced steps to work in project. We will have some main sessions below:

- Protractor introduction
- Building up and creating a simple test script
- Getting familiar with Cucumber
- Using page object model (POM) with protractor and cucumber
